

# DEVELOP National Program

**GLSLCI – 2015 Annual Meeting and Conference**  
Sarnia, Ontario – 19 June 2015

NASA Earth observations include a coordinated series of polar-orbiting and low inclination satellites for long-term global observations

# DEVELOP National Program

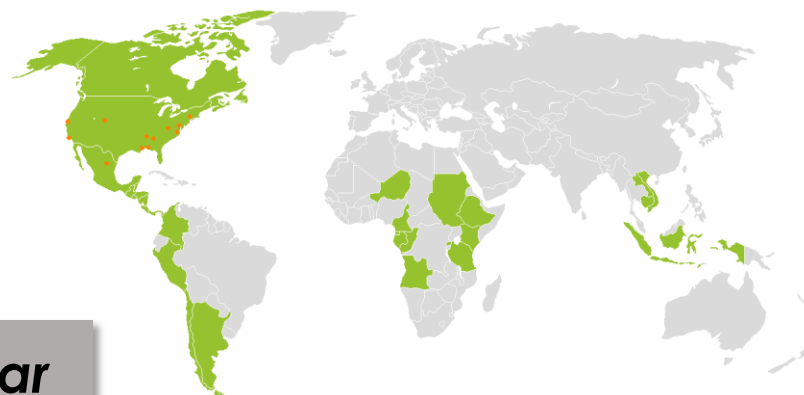

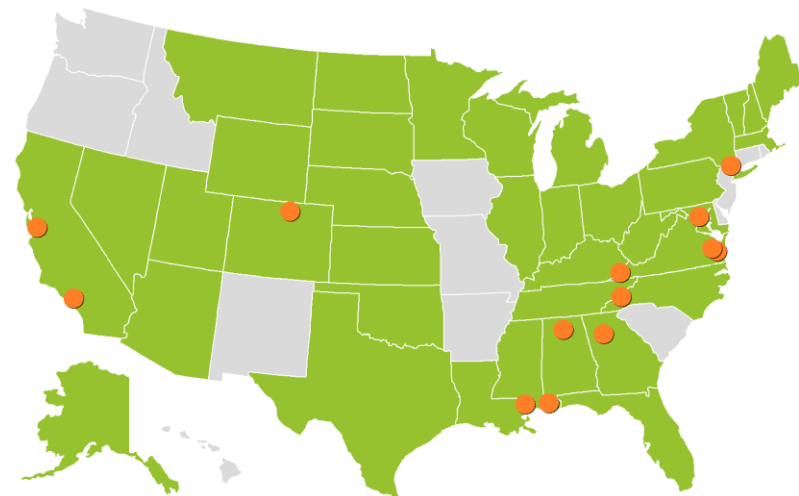

## What is DEVELOP?

**NASA** workforce development program that **collaborates** with **decision makers** to conduct environmental research projects using **NASA Earth observations**

## 2014 Summer Project Impact

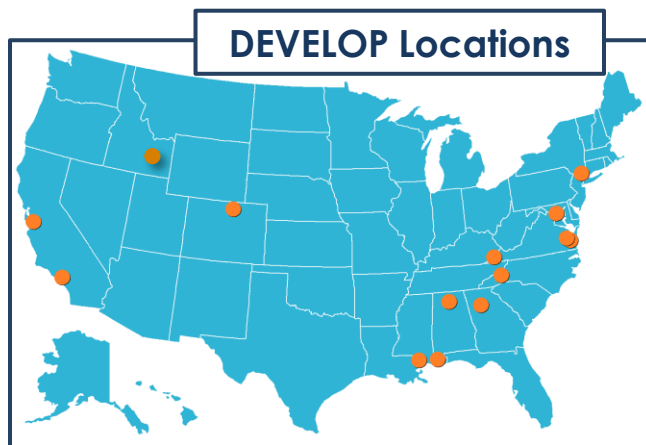

**> 350 Participants & 80 Projects Per Year**

# DEVELOP National Program

- Address **community concerns** relating to environmental issues
- **Collaborate with local, state, regional, federal and/or international organizations** who can benefit from using NASA Earth observations to **enhance decision making**
- Utilize and highlight the **application of NASA Earth observations**
- **Science advisors and mentors** from NASA and partner organizations

## Who can participate?

- Age 18 or older
- Interested in Earth science & remote sensing
- U.S. citizenship for NASA Centers

**DEVELOP is an incubator and accelerator for NASA Earth science applications**

GLSLCI and DEVELOP partnership facilitates a direct line of communication between decision makers in the Great Lakes region and NASA and other US Federal agency Earth observations and resources

## Previous Projects:

- Extreme Precipitation Event Analysis
- Stormwater Runoff Impacts on Lake Erie
  - Soil Erosion Potential in Duluth

Dr. Kenton Ross (NASA), Dave Ullrich (GLSLCI), and Ande Ehlen (DEVELOP) at 2012 GLSLCI Annual Meeting

# GREAT LAKES CLIMATE

## *Impact of Decreasing Lake Water Levels on Georgian Bay Wetlands*

-

  - ▶ Lydia Cuker
  - ▶ Kathy Currie
  - ▶ Idamis Del Valle Martínez
  - ▶ Lacey Freese
  - ▶ Miriam Harris
  - ▶ Janice M. Maldonado Jaime
  - ▶ Pamela King
  - ▶ Daniel Marx
  - ▶ Stephen Zimmerman

# Wetlands

- ▶ Interface of terrestrial and aquatic ecosystems
  - ▶ Control soil chemistry and development

Photo by Emily Adams

# Wetlands

- ▶ Interface of terrestrial and aquatic ecosystems
  - ▶ Control soil chemistry and development
- ▶ Estimated to provide over \$10,000 USD per acre (C\$ 12,330) in ecosystem services
- ▶ Decreased more than 50% in the Great Lakes Basin due to human development

Photo by Emily Adams

# Wetlands

- ▶ Interface of terrestrial and aquatic ecosystems
  - ▶ Control soil chemistry and development
- ▶ Estimated to provide over \$10,000 USD per acre (C\$ 12,330) in ecosystem services
- ▶ Decreased more than 50% in the Great Lakes Basin due to human development

# Great Lakes

- ▶ Largest source of fresh water
- ▶ A detailed, consistent, easily updatable, wetlands land cover classification for the region is lacking

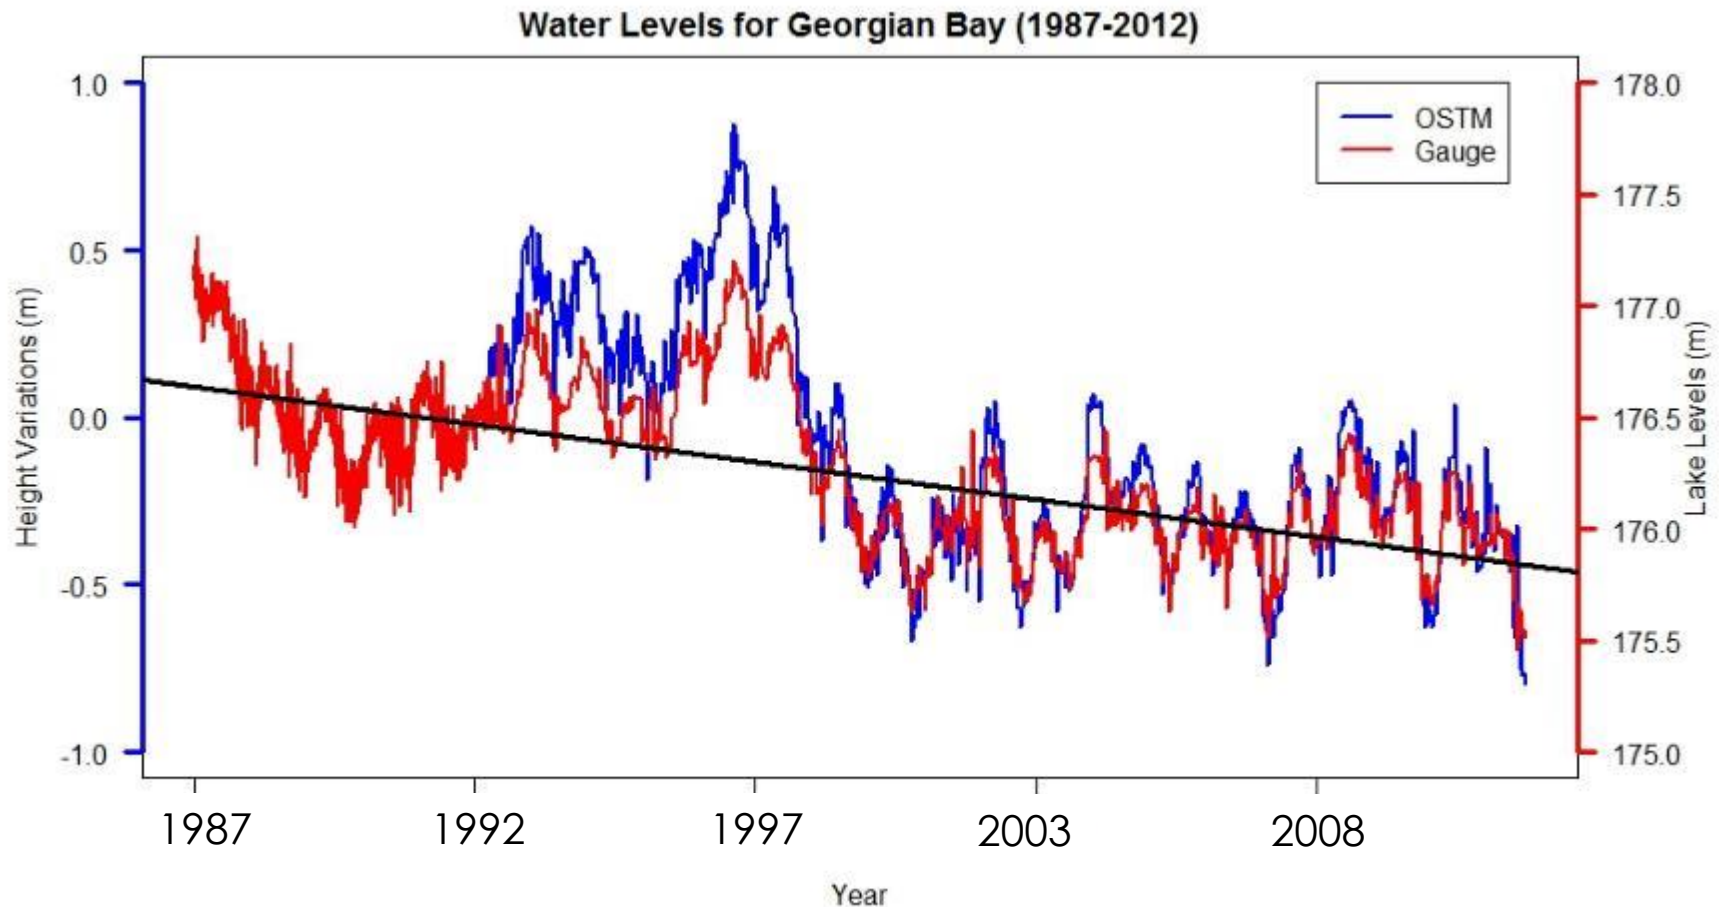

Photo by Jeff Schmaltz, MODIS Rapid Response Team, NASA/GSFC

# Water Levels in the Great Lakes

- ▶ Natural fluctuations due to climate variability
  - ▶ Vegetation adapts to these changes

# Objectives

1. Classify land cover types within 10 km of Shoreline for 1987 and 2013
2. Georgian Bay Wetland extent change maps

Georgian Bay May 1987  
(Landsat 5 TM)

# Methodology

## Data Acquisition

### Land Cover Classification

*Landsat 5*  
July 1987

*Landsat 8*  
June 2013

*ASTER DEM*

### Water Levels

TOPEX/Jason-1  
OSTM/Jason-2  
*In situ* water level  
gauges

## Data Processing

Top of Atmosphere  
Corrected

Mosaicked  
Landsat Scenes

Study area  
defined by 10 km  
buffer around  
shoreline

## Data Analysis

Training Site  
Selection

Random Forest Land  
Cover Classification  
Script (R)

Comparison to  
SOLRIS

# Results: Classified Maps Georgian Bay

# Results: Wetlands Extent Change Maps

# Conclusions

- ▶ Georgian Bay: 1987-2013
  - ▶ 7% Wetland Gain
  - ▶ 10.8% Wetland Loss
  - ▶ 3.8% net loss = 430 km<sup>2</sup>

# Benefits of Research

- ▶ More cost effective, replicable methodology for land classification maps over large spatial scales
- ▶ Facilitate comparison of wetlands extent over time
- ▶ Insights on impact of changing water levels to wetlands health

Great Lakes Climate I Team (L to R): Kathy Curie, Janice M. Maldonado Jaime, Emily Adams, Daniel Marx, Miriam Harris and Lydia Cuker

Great Lakes Climate II Team (L to R): Miriam Harris, Emily Adams, Stephen Zimmerman, Idamis Del Valle Martinez

# Collaborate & Participate

## Ways to Get Involved

- **Propose a project**
  - Identify a decision support need and end-user for a DEVELOP project
  - Template available for project proposal
- **Encourage people to apply**
  - Online application (*dates below*)

## What we look for in a good project idea:

- Achievable with NASA Earth observing resources over a 10 to 30-week period
- Addresses an actionable community concern
- Robust communication with end-user
- Specific study region rather than a large area
- Expectations are clear

### **Apply:**

[develop.larc.nasa.gov/apply.html](http://develop.larc.nasa.gov/apply.html)

### **Fall 2015 Term**

**Application Window:**

25 May – 3 July 2015

**Term Dates:**

14 Sep – 20 Nov 2015

### **Proposal Deadline for Spring 2016 Projects:**

28 August 2015
