

# Great Lakes Ecological Forecasting

*Utilizing NASA Earth Observations to Monitor and Forecast the Spread of *Phragmites australis* in the Great Lakes Basin*

---

C. Issac Kinton (Project Lead)

Peter Jacobs

Sean McCartney

# Phragmites

- ▶ *Phragmites australis* subsp. *australis*
- ▶ Common reed
- ▶ Worldwide
- ▶ Perennial wetland grass
- ▶ Invasive species
- ▶ Lowered biodiversity

Image credit: Pixabay

# Study Area

- ▶ Great Lakes Basin
- ▶ Canada & U.S
- ▶ 18% of worlds freshwater
- ▶ 90% of U.S freshwater
- ▶ 34 million people

Image credit: ESRI

# Study Period

- ▶ 1985 – 2015
- ▶ Habitat suitability model for 2015  
Phragmites extent
- ▶ Forecast for 2020

Image credit: Pixabay

# Community Concerns

- ▶ High cost of management
- ▶ Hard to eradicate
- ▶ Lowers biodiversity
- ▶ Detriment to property value
- ▶ Rapidly expanding

Image credit: U.S. Fish and Wildlife Service

# Partners

## Great Lakes St. Lawrence Cities Initiative

- Member Cities in U.S & Canada
- Assist in policy making
- Provide updated Phragmites information

## Michigan Tech Research Institute

- Experience in mapping Phragmites regionally
- Remotely sensed imagery

Image Credit: Neil Cornwall

*Neil Cornwall*

# Objectives

- ▶ Assess the value of Earth observations in creating environmental variables
- ▶ Model a current risk map of Phragmites
- ▶ Model land change as driver variables for ecological forecasting
- ▶ Forecast a risk map of Phragmites for 2020

Image credit: Andreas Trepte

# Data: Phragmites

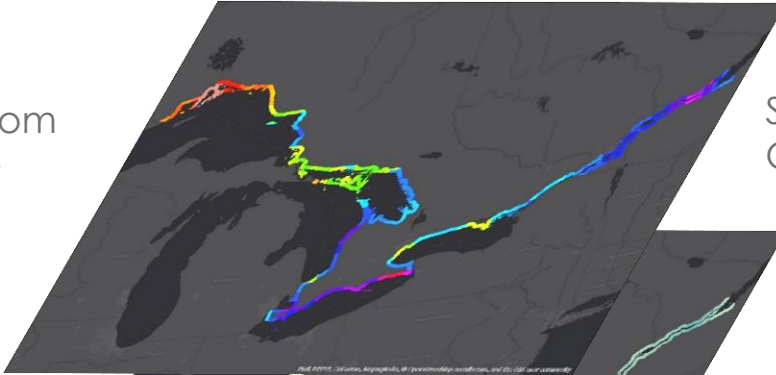

- ▶ Early Detection & Distribution Mapping System
- ▶ MTRI Field Survey
- ▶ Global Biodiversity Information Facility
- ▶ Used for model training and validation
- ▶  $n = 1,163$

# Driver Variables

Distance from  
Agriculture

Soil Drainage  
Class

Distance from  
Developed

Topographical  
Roughness

Distance from  
Roads

Driest Period  
Temperature

Coldest  
Quarter  
Precipitation

Warmest  
Quarter  
Precipitation

# Earth Observations - SRTM

- ▶ Shuttle Radar Topography Mission (SRTM)
- ▶ Slope
- ▶ Topographic Roughness
- ▶ 30m Digital Elevation Model

Image credit: NASA

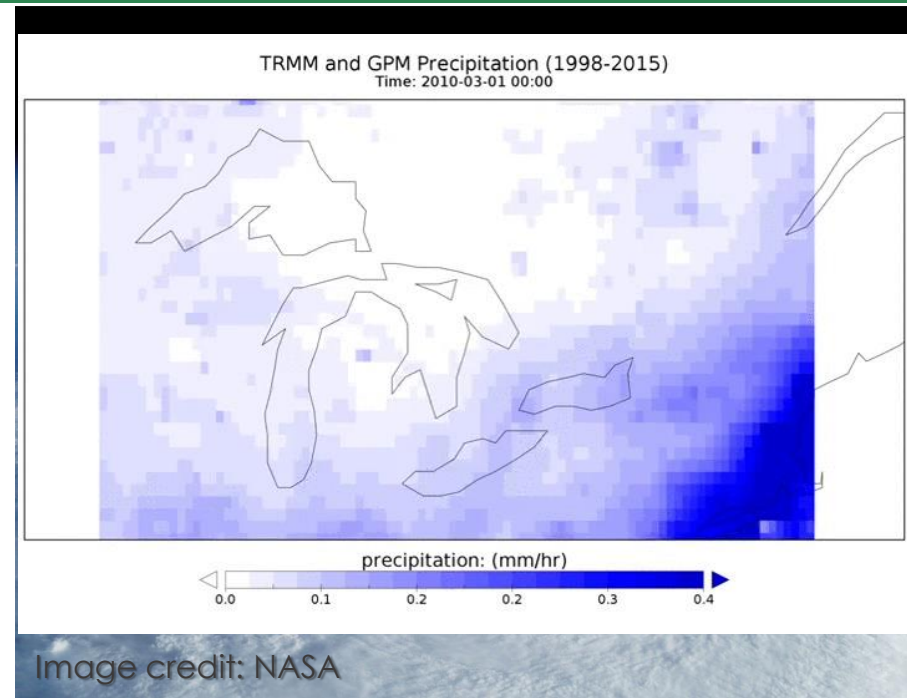

# Earth Observations

## TRMM + GPM

### ► Precipitation

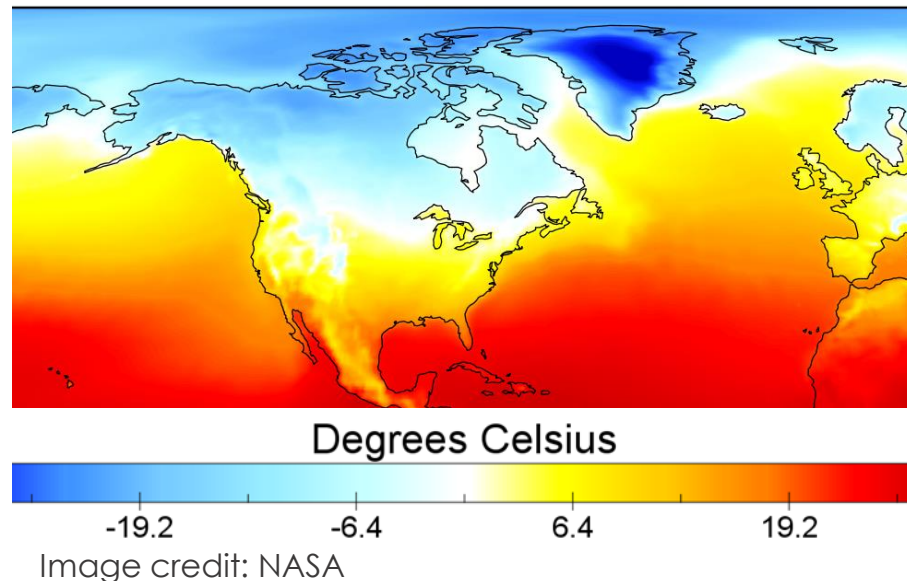

- TRMM (Tropical Rainfall Measuring Mission)
- GPM (Global Precipitation Measurement)

MERRA2 Surface Air Temperature  
Winter (DJF) 2010

### ► Temperature

- MERRA-2 (Modern-Era Retrospective Analysis for Research and Applications-2)

Dry seasons are getting **warmer**.

# Methodology

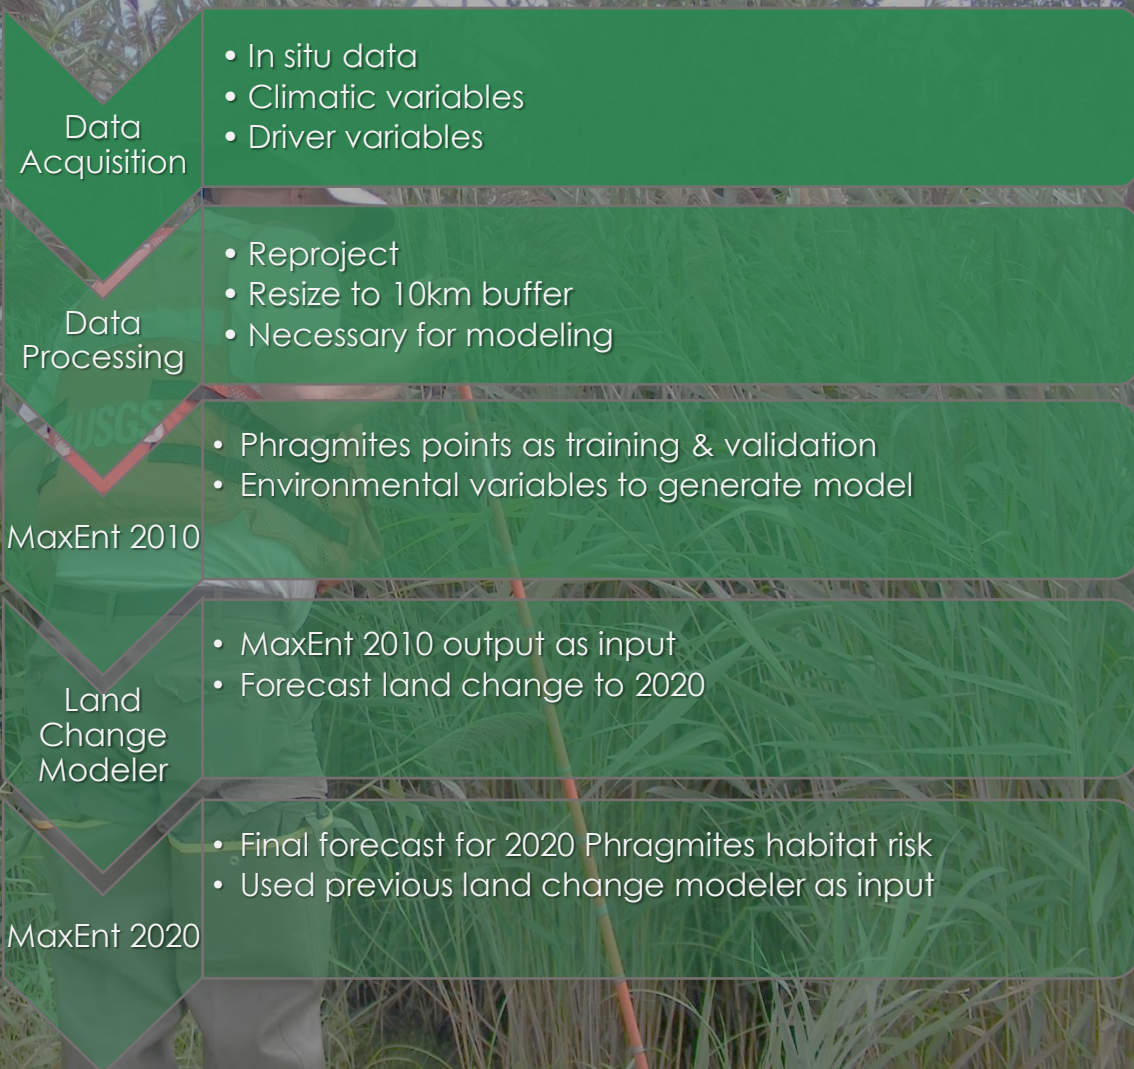

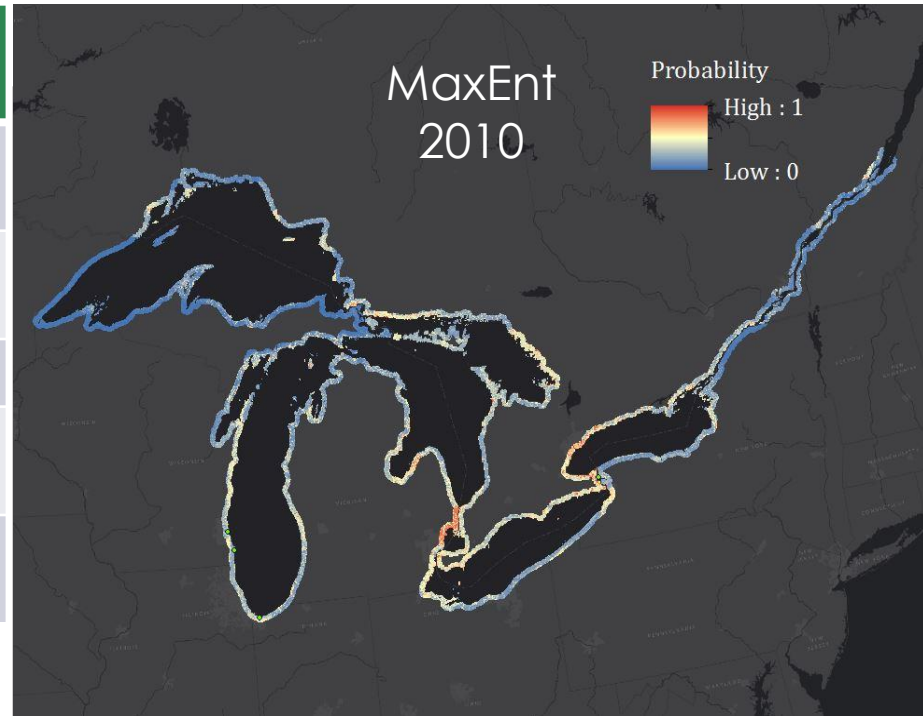

Image Credit: Kurt Kowalski,  
USGS

# Results – MaxEnt 2010

Variable contributing most to model	Percent contribution
Topographic roughness	28
Driest season temperature	17.7
Soil drainage	13
Distance from agriculture	12.5
Distance from developed	4.6

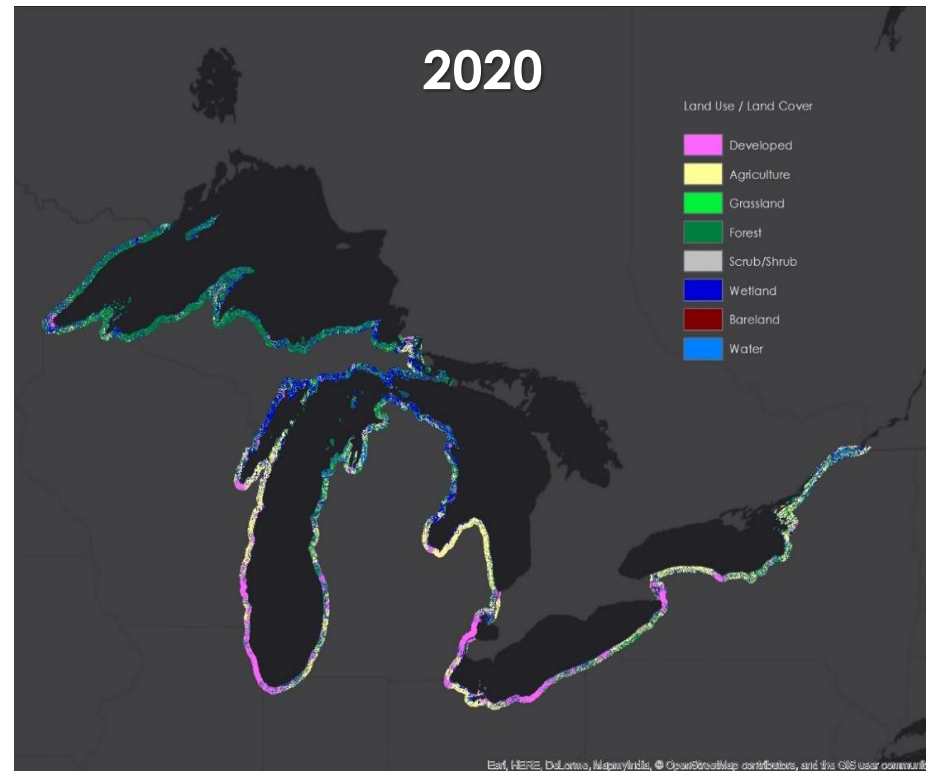

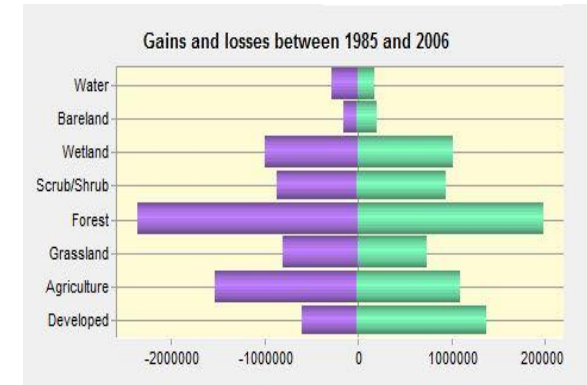

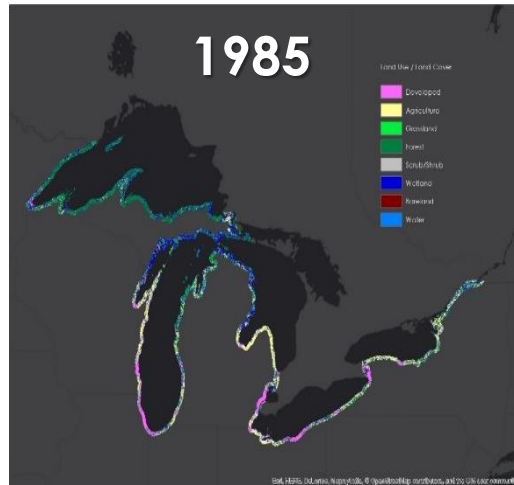

■ Coldest season precipitation

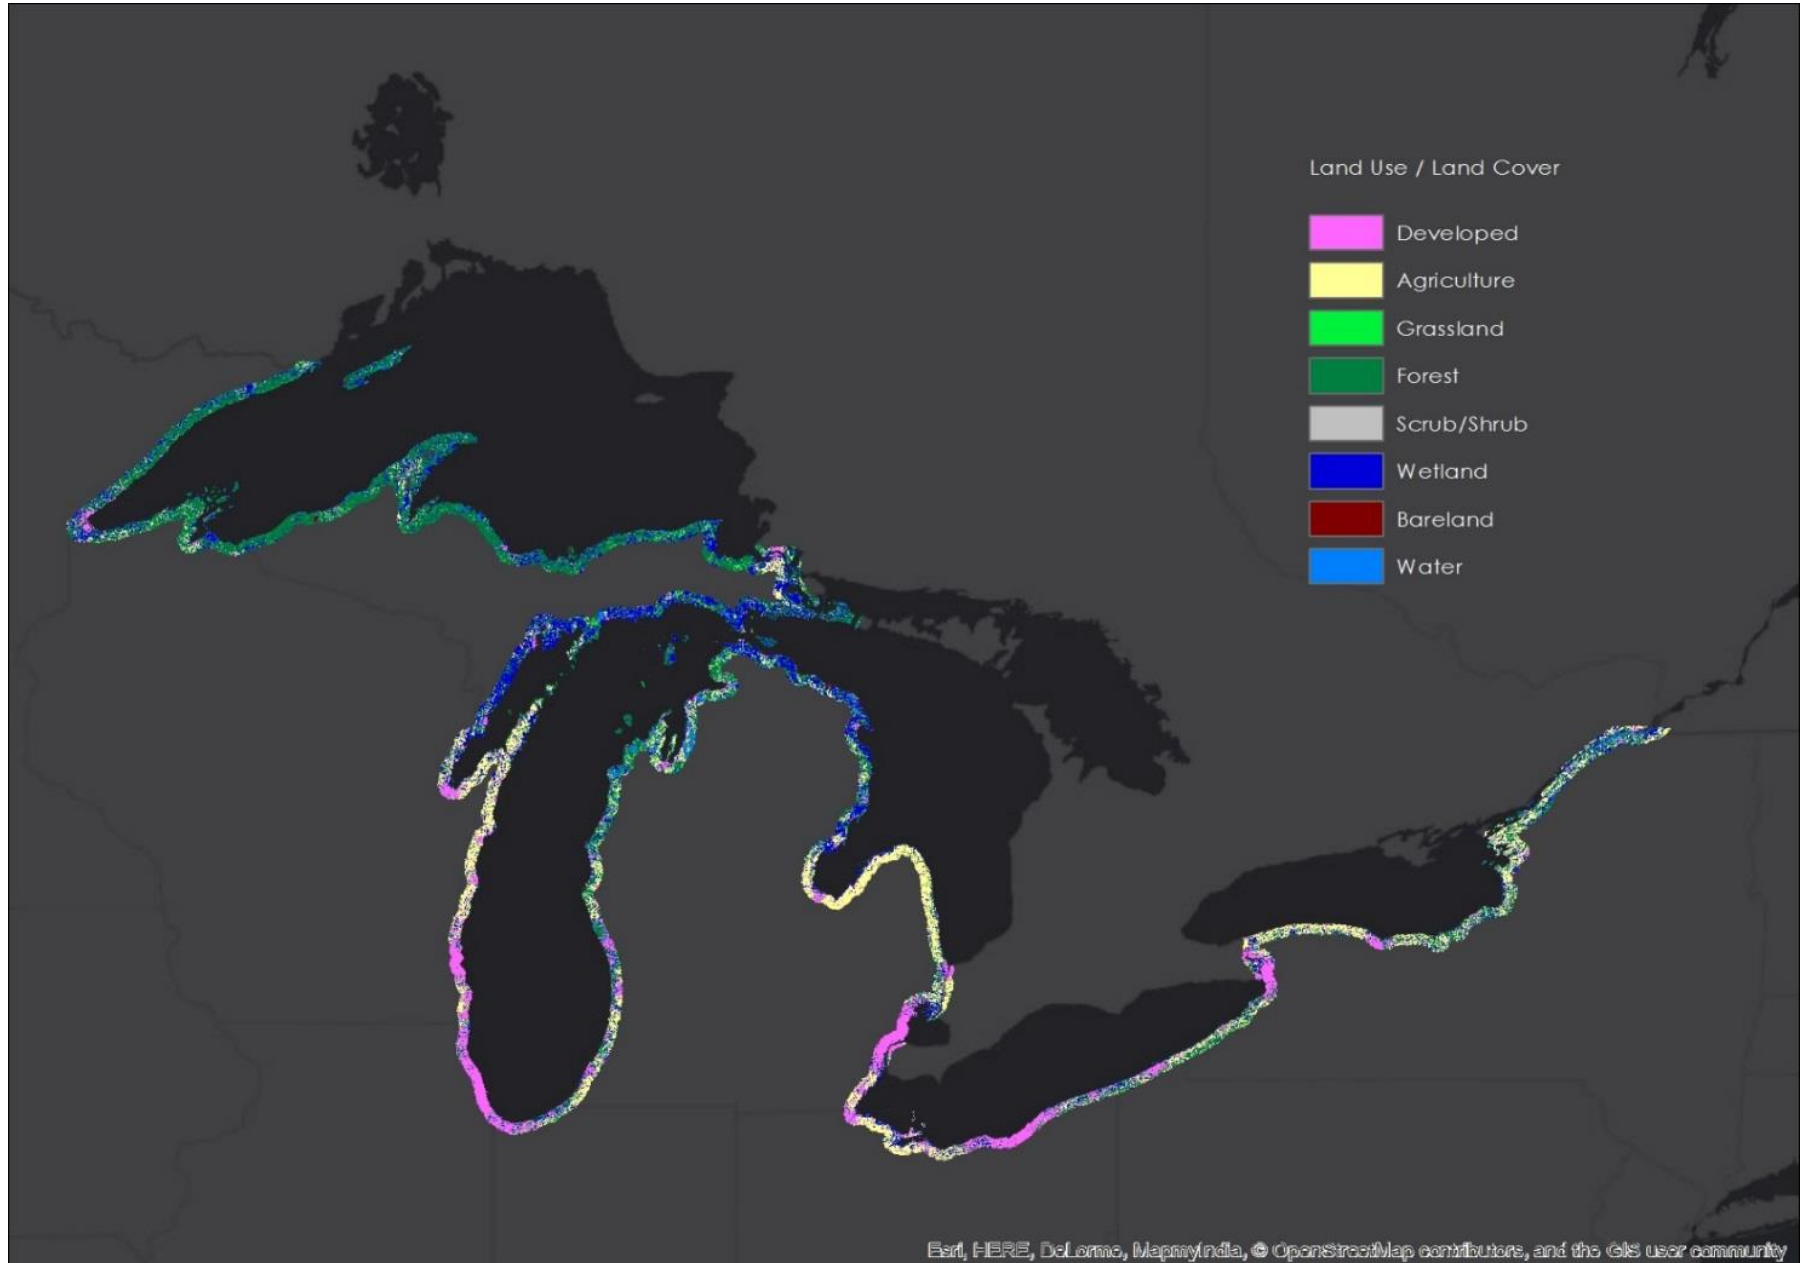

Variable	Percent contribution	Permutation importance
maxent_US_TR_ASCII	28	22.1
maxent_US_DryTemp_2010_ASCII	17.7	34.4
maxent_US_ColdTemp_2010_ASCII	17.1	2.6
maxent_US_SoilDrainage_ASCII	13	8.2
maxent_Dist_2_Agr_2010_USA_ASCII	12.5	11.8
maxent_Dist_2_Dev_2010_USA_ASCII	4.6	11.2
maxent_US_DIF_2010_2011_ASCII	3.2	6.2
maxent_Dist_2_Roads_USA_ASCII	2.2	2
maxent_US_JJA_2010_2011_ASCII	1.7	1.4

# Future Work & Limitations

- ▶ Increased Phragmites data points
- ▶ Normalize spatial resolution
- ▶ Fine tune model
- ▶ Update land cover maps

Image credit: Sunghwan Yoon

# Conclusions

- ▶ Phragmites risk areas growing (LCM Habitat Growth)
- ▶ Phragmites closest to agriculture, development, roads
- ▶ Trend: Human interaction leads to Phragmites increase
- ▶ Climate: trending towards increasing Phragmites growth
